We can now offer you support to upgrade your sprayer filling with a

CLOSED TRANSFER SYSTEM

love every drop anglianwater

Following a number of years trials and development, CTS are now a safer, quicker and more reliable way to get ag-chems into your sprayer, benefitting from industry wide co-operation amongst chemical manufacturers to supply a standard cap to be used on these systems. From now on you will see an ever increasing range of products delivered on farm ready to use through CTS systems. Recent improvements also mean an optional measuring device can now be integrated to enable accurate use of part containers.

Why should I use a CTS?

- Risk of operator exposure reduced
- Risk of splashes from induction bowl eliminated
- Risk of spills from open cans eliminated
- Now suitable for all container sizes

Anglian Water offer. (Budget limited, offer may close without notice)

- 50% funding towards the cost(ex vat) of a closed transfer system for farm sprayers. (max claim £2500)
